

CellTrust SecureLine™

The Leading Enterprise Solution
for Secure Voice and Secure SMS

Take control of business communications by encrypting, tracking and archiving all voice and text messages.

As workforce mobility becomes more prevalent due to the flexibility and productivity it enables—so do threats to corporate assets, privacy, confidentiality and regulatory obligations—specifically with the rise of BYOD and need for smarter controls. That’s why organizations turn to CellTrust SecureLine™, which offers voice and text messaging that can be secured, archived and traced.

Secure messaging – efficiently stamp, track, log and archive text messages

Mobile device use for work is a growing concern among employers, specifically texting, which is favored by most employees for its convenience and immediacy. That’s why compliance leaders rely on CellTrust SecureLine to protect, archive and assure delivery of their employees’ business text messages.

Compliance: All text communications made using the app are time and date stamped, tracked, logged and archived for eDiscovery and retention in support of compliance.

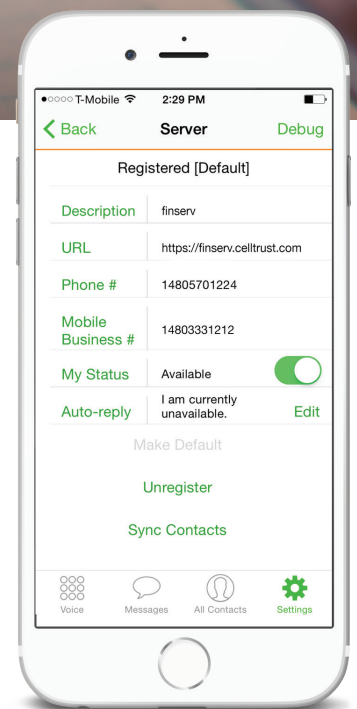

Secure messaging: A mix of server registration, multi-factor authentication and AES encryption, featuring unique dynamic keys and full key lifecycle management.

Critical messaging: Ability to override the silent mode of a device for urgent messages.

Message status: Know when a message has been delivered, opened and deleted.

Discreet message lifespan: Define the duration of a sent message’s availability and storage on the receiving device through the app.

Extended message size: Up to 5,000 characters by default through the mobile control channel and unlimited characters when messages are sent through data.

The CellTrust SecureLine App:

- Assigns a separate Mobile Business Number to the device
- Features a separate SMS inbox, contact list and phone log
- Creates a dual persona, so personal and business communications are always kept separate
- Is available on both Android™ and Apple iOS™ devices

Secure voice – manage work and personal voice calls with confidence

The CellTrust SecureLine app captures all incoming and outgoing calls made on the Mobile Business Number and provides audio recordings to help meet supervision and compliance needs. Now it's possible for businesses to allow employees to bring their own device—and be in support of compliance.

Compliance: Ensure calls made to and from the Mobile Business Number are in support of SOX, SEC, GLBA, HIPAA, and the Dodd-Frank Act in the United States; FSA and FCA in the United Kingdom; and MiFID II in Europe.

Secure voice: Powerful AES encryption and traceability for highly sensitive calls using Wi-Fi, 3G, 4G and LTE network protocols for reliability and cost savings on roaming.

Single number reach: Redirect calls to any phone or device, giving employees the ability to engage in secure business calls.

Dual persona: Employees can securely communicate with colleagues, partners and clients knowing that their personal communications remain untouched. Businesses have assurance that corporate assets and client contacts are protected.

Split billing: Eliminate mobile device reimbursements. Employees manage charges for personal calls, while business calls are applied to the company.

Flexible deployment: Deployed as SaaS or in an on-premise, customer-hosted environment, CellTrust SecureLine operates securely within a variety of enterprise MDM/EMM environments.

Archiving – secure reporting, audit trails and traceability

To help mitigate risk and respond to eDiscovery and compliance, CellTrust SecureLine offers comprehensive reporting, audit trails, traceability and archiving.

Voice archiving: Efficiently and affordably store voice conversations, particularly for highly regulated industries such as financial services, healthcare and government.

SMS archiving: Keep electronic records of text messages ahead of regulatory audits.

Reporting: Leverage administrative access in order to audit content, receive intrusion reports and follow audit trails.

The following industries benefit from CellTrust SecureLine

Financial Services: Allows your vast network of financial services professionals to engage in secure mobile business conversations while adhering to regulatory requirements.

Healthcare: Eliminates the risk associated with weak signals and archaic callback scenarios with secure, next-generation paging capabilities.

Government: Secures sensitive data, protects internal information and ensures staff privacy in accordance with federal, state and local regulations.

CellTrust is ready to help. Learn how you can secure your mobile business communications to reap the full benefits of BYOD.

- Comply with regulatory requirements
- Protect and archive sensitive data
- Empower the mobile workforce
