

SL2 Enterprise Capture for Financial Services

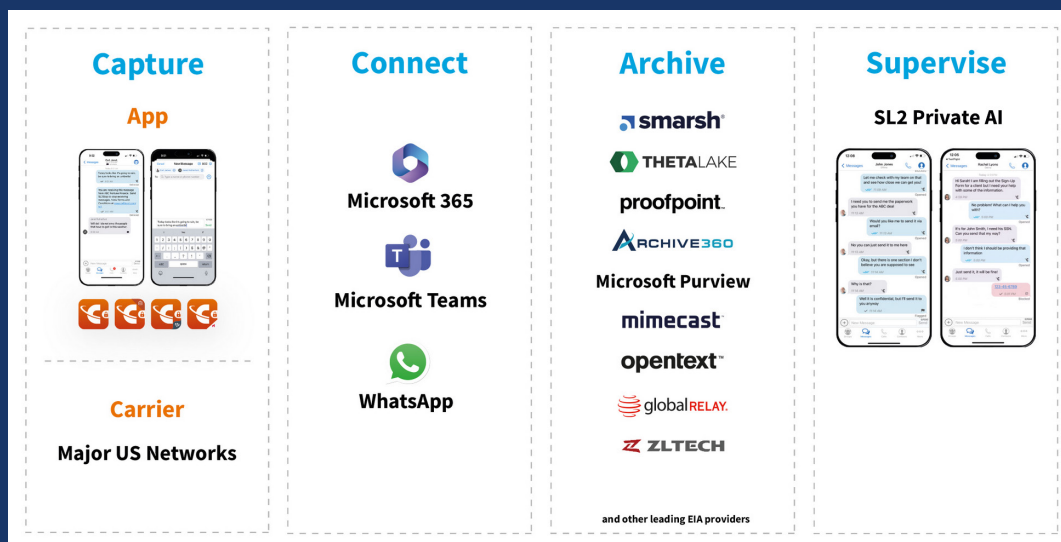

Mobile communication capture, supervision and archiving

CellTrust's SL2 Enterprise Capture platform enables collaborative and compliant mobile business communication internally and externally across your organization and industry. Delivering seamless mobile communications capture across all carriers, iOS and Android operating systems and device ownership models, our platform provides App Capture for BYOD and Carrier Capture for COBO corporate liable strategies. Enterprise customers can also combine both capture methods on a single device with CellTrust's Stacked Capture solution for enhanced compliance protection.

Features and Benefits:

- SMS out-of-office/autoreply
- API for SL2 platform available

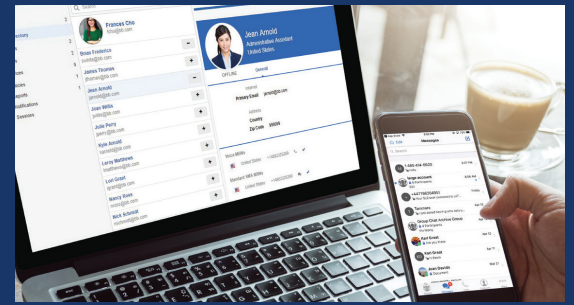

CellTrust's SL2 Enterprise Capture platform supports App Capture and Carrier Capture, or a combination called Stacked Capture. Check out our range of flexible and compliant solution packages and soon, you will be seamlessly capturing, connecting, archiving and supervising across your organization

Seamless recordkeeping, retention and records management

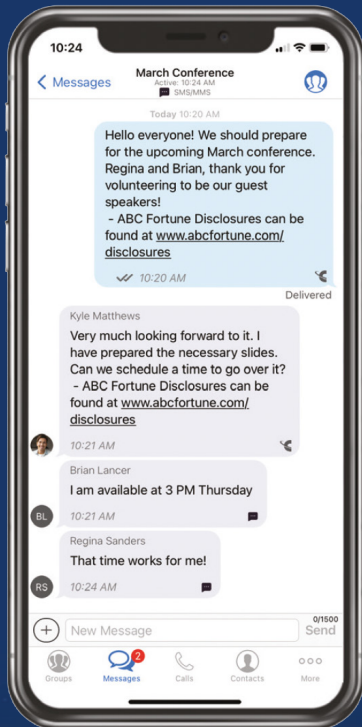

Meeting records retention compliance regulations has never been more streamlined. SL2 Enterprise Capture is archiving agnostic — with multiple archiving options available for text, MMS, chat, voice, separate voice and SMS endpoints, and short code. Choose a custom archiving solution, bring your organization’s current archiving platform with you, or choose from one from CellTrust’s leading archiving technology partners.

Communications can be synced on multiple devices so financial advisors can start a conversation in their SL2 mobile app and continue that conversation from the SL2 web portal when they get to the office.

One Device. Total Separation. Complete Confidence.

With the SL2 app for BYOD, financial advisors can seamlessly manage both work and personal communication on a single device—without sacrificing privacy or compliance. Financial advisors can continue using their personal mobile numbers and native texting and calling apps to stay connected with friends and family. These conversations remain completely private—untouched by SL2. The SL2 app is purpose built for privacy and compliance. It cannot access, view, or capture any personal messages or calls made through the phone’s native apps. Business stays business. Personal stays personal. Advisors can work smarter—without carrying two phones.

SL2 True Group Messaging

Feature rich compliant business messaging

Developed with compliance in mind, the SL2 app is packed with easy to use, compliance related messaging features to ensure your team and organization can reduce the risk of violations. Compliant SMS/MMS and Group MMS, private chats, group chats, scheduled messages and broadcast announcements/bulletins and chats are enabled. Messaging templates, personal signatures and corporate disclaimers are provided and can easily be customized and updated. Search message body, phone number blocking and automatic replies are also valued features. With SL2, your organization gets the freedom to message—strategically, securely, and fully compliant.

Choose from a range of flexible packages

CellTrust offers a wide range of flexible, compliant and feature rich messaging, voice and UEM packages available to help your enterprise leverage mobile engagement while meeting regulatory compliance.

-  SL2 Business Messaging Package
-  Microsoft Intune Messaging/Voice Package
-  Ivanti Neurons™ Messaging/Voice Package
-  BlackBerry® UEM Messaging/Voice Package

App Capture = texts and messages sent over a separate phone number assigned to the SL2 App are captured
Carrier Capture = SMS/MMS messages sent through the carrier network are captured
Stacked Capture = App Capture + Carrier Capture ensures SL2 app texts, messages and the device's native SMS/MMS are captured
BYOD = Bring Your Own Device
COPE = Corporate Owned Personally Enabled
COBO = Corporate Owned Business Only
